This page tells the opening story of AI's global impact — \$975M

invested, 3B jobs created, but 130M at risk. It shows how adoption is spreading across industries and regions, with the Middle East leading at 61.2%. Salaries are shifting, automation risk is rising, and the future of work is being rewritten.

This page explores the power behind the numbers — how AI tools drive the future of work. From ChatGPT-4o's 500 M users to Claude 3.7 Sonnet's unmatched safety score (98), each tool reveals a different strength: coding, reasoning, creativity, and reliability. Together, they show how innovation scales from capability to impact.

## Claude Use cases

This page showcases Claude's integration with Power BI, demonstrating how AI can automate analytics tasks — from DAX creation and data validation to performance optimization and report design. It highlights Claude's role in boosting productivity and ensuring data quality across business intelligence workflows.

Made By Gyanankur Baruah

| Category           | PBI Feature Used | UseCase                           | Example Prompt for Claude                                                                           |
|--------------------|------------------|-----------------------------------|-----------------------------------------------------------------------------------------------------|
| Training / Eval    | Auto Scoring     | Automated Assessment Scorecard    | Connect to participant PBIX. Evaluate: 1)Measures table? 2)DI Score/20 and output formatted report. |
| Requirements       | Business Rules   | Translate Business Rules to DAX   | Write DAX: 1) HighRisk = AutomationRisk>70 2) StarPerforme YearsExp<3                               |
| Calculated Columns | Calc Columns     | Create Age Band Calculated Column | In Dim_Customer, create [AgeGroup] = SWITCH(TRUE(), Age<                                            |
| Data Validation    | Data Quality     | Detect Data Quality Issues        | Scan Fact_Claims. Count nulls per column, duplicate ClaimID                                         |
| Date Intelligence  | Date Table       | Create Complete Date Table        | Create Dim_Date using CALENDARAUTO(). Add Year, Month,                                              |
| DAX Creation       | DAX Measures     | Auto-Generate DAX Measures        | Connect to my Power BI model. Create [Total Premium] = SUM                                          |
| Performance        | DAX Optimization | Optimize Slow DAX with VAR        | My [Loss Ratio] is slow. Rewrite using VAR to avoid redundan                                        |
| Documentation      | Documentation    | Generate Measure Documentation    | Read every DAX measure. For each: name, table, formula, plai                                        |
| Navigation         | Drill-Through    | Set Up Drill-Through Page         | Set up drill-through page 'Customer Detail'. Filters from Cust                                      |
| Report Polish      | Dynamic Title    | Create Dynamic Visual Titles      | Write dynamic title: 'Revenue by Region — [Selected Year]   F                                       |

| Category          | Difficulty | Business Value | Description                                                                     |
|-------------------|------------|----------------|---------------------------------------------------------------------------------|
| Power Query       | Medium     | High           | Claude writes M transformations from plain English.                             |
| Report Polish     | Medium     | Medium         | Claude writes DAX for context-sensitive chart titles.                           |
| Report Design     | Easy       | High           | Claude writes DAX for all 5 KPI cards needed.                                   |
| Quality Assurance | Hard       | Very High      | Claude scans all measures for broken references.                                |
| Performance       | Hard       | Very High      | Claude rewrites inefficient DAX using VAR patterns.                             |
| DAX Audit         | Medium     | Very High      | Claude reviews DAX and flags logic errors, missing CALCULATE, bad aggregations. |
| DAX Creation      | Easy       | High           | Claude reads model and writes correct DAX matching schema column names.         |
| Data Validation   | Medium     | Very High      | Claude queries model for nulls, dupes, invalid values.                          |
| Design Advisory   | Easy       | Medium         | Claude maps each KPI to the optimal Power BI visual.                            |
| Date Intelligence | Easy       | High           | Claude generates CALENDARAUTO date table with all required columns.             |
| Training / Eval   | Hard       | Very High      | Claude evaluates participant PBIX and scores against rubric.                    |
| Scenario Analysis | Medium     | High           | Claude creates What-If parameter and scenario measures.                         |
